## PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 5 (California) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 5 (California) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

November 1951.

# CALIFORNIA

## Number of Inhabitants

**The State.**—California was organized as a State from a part of the area acquired from Mexico in 1848 and was admitted to the Union in 1850 as the thirty-first State with boundaries as at present. Its population on April 1, 1950, according to the Seventeenth Census, was 10,586,223. The State has a land area of 156,740 square miles. In 1950 there was an average of 67.5 persons per square mile as compared with an average of 44.1 in 1940. Among the States, California ranked second in both population and land area.

In 1860, the first year for which complete returns are available for the State, California had a population of 379,994 (table 1). In 1950, 90 years later, the population was almost 28 times as large. Nine-tenths of the gain over the 90-year period came between 1900 and 1950. The increase of 3,678,836 between 1940 and 1950 was the largest decennial increase ever recorded for any State in the history of the Nation. This gain represented an increase of 53.3 percent over the 1940 population of 6,907,387. The period 1940 to 1950 also marked the third successive decade in which California led the other States in the amount of increase.

**Usual place of residence.**—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of

institutions, who ordinarily live<sup>1</sup> there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

**Urban and rural population.**—The 1950 urban population of California comprised 8,539,420 persons, or 80.7 percent of the population of the State (table 1). The urban population was living in the 253 urban places in the State and in other territory included in the urban-fringe areas of the eight urbanized areas in the State. More than four-fifths of the urban population of the State was living in urbanized areas (table 2).

The 1950 rural population of California comprised 2,046,803 persons, or 19.3 percent of the population of the State (table 1). Of the rural population, 249,664 persons, or 12.2 percent, were living in the 67 incorporated and 81 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

**Urban definition.**—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,<sup>1</sup> and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants, or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course, the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

According to the new urban definition, the 1950 urban population of California included the following components: (1) The 7,052,499 inhabitants of the 210 incorporated places of 2,500

<sup>1</sup> Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

## CALIFORNIA

inhabitants or more; (2) the 251,469 inhabitants of the 43 specially delineated unincorporated places of 2,500 inhabitants or more; and (3) 1,235,452 persons living in other territory included in the urban-fringe areas of the Fresno, Los Angeles, Sacramento, San Bernardino, San Diego, San Francisco-Oakland, San Jose, and Stockton Urbanized Areas. There was one place in California that was classified as urban under special rule according to the old definition—Belvedere township, in Los Angeles County. The urban population under the old definition, therefore, consisted of the 7,052,499 inhabitants of the incorporated places of 2,500 or more and the 46,667 inhabitants of Belvedere township. All the inhabitants of Belvedere township were classified as urban under the new definition because the township was included in the urban fringe of Los Angeles. The gain in the urban population of California which resulted from the change in definition is 1,440,254, that is, the 251,469 persons living in the unincorporated places of 2,500 inhabitants or more and 1,188,785 persons living in unincorporated territory other than Belvedere township included in the urban-fringe areas of the eight urbanized areas in the State.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1850 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and the old definitions.

**Trends of urban and rural population.**—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the 1950 urban population of 7,099,166 was more than nine times as large as the 1900 urban population of 776,820 (table 1). More than one-third of the increase over the 50-year period was accounted for by the gain of 2,196,901 between 1940 and 1950. This increase represented a gain of 44.8 percent over the 1940 urban population of 4,902,265. One of the cities of 10,000 inhabitants or more in the State—San Pablo—was incorporated in 1948. All the other 104 cities of this size in the State shared in the increase in the urban population between 1940 and 1950, with the rates of gain ranging from 1.7 percent for Brawley to 321.1 percent for Richmond (table 4). The numerical increase of 466,081 for Los Angeles city accounted for more than one-fifth of the increase in the urban population of California. In 1900 there were 445,261 persons living in the two cities of 100,000 inhabitants or more in the State; by 1950 there were 4,071,398 in the eight cities of this size. The proportion of the population of California living in urban territory increased from 52.3 to 67.1 percent between 1900 and 1950. It had been as high as 73.3 percent in 1930.

The rural population of California, which was 708,233 in 1900, increased to 3,487,057 in 1950 (table 1). The increase of 1,481,935 between 1940 and 1950 was larger than the gain over the previous 40 years and represented a gain of 73.9 percent over the 1940 rural population of 2,005,122. The rates of growth for the rural population exceeded those for the urban population in both decades in the period 1930 to 1950. As a result, the proportion of the population of California living in rural territory, which had declined from 47.7 percent in 1900 to 26.7 percent in 1930, rose to 32.9 percent in 1950.

**Counties.**—The counties in California ranged in size from Alpine with a population of 241 to Los Angeles with a population of 4,151,687 (table 5). Between 1940 and 1950, 54 of the counties increased in population as against 56 in the previous decade. The most rapid rate of growth was experienced in Contra Costa County, which had nearly three times as many inhabitants in 1950 as in 1940. In two other counties—San Mateo and Solano—the population more than doubled over the 10-year period. As in the previous decade, the largest numerical increase was recorded in Los Angeles County. The increase of 1,366,044 for Los Angeles County accounted for more than one-third of the gain for the entire State.

**Minor civil divisions.**—To the primary political divisions into which counties are divided, the Bureau of the Census applies

the general term "minor civil divisions." The minor civil divisions in California are the judicial townships and one city, Sacramento. San Francisco, which is incorporated as the "City and County of San Francisco," is not divided into judicial townships. The incorporated cities (except Sacramento and San Francisco) and towns form subdivisions of the minor civil divisions in which they are located.

Table 6 shows statistics on the population of each county by minor civil divisions for the last three censuses. The population of each city, town, and unincorporated place is shown in *italics* under the population of the judicial township in which it is located. When a city, town, or unincorporated place lies in two or more minor civil divisions, the population of the several parts is shown in table 6 in the appropriate judicial districts, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of areas listed are shown in the notes to table 6. For changes in the boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 123-126, and reports of earlier censuses.

**Incorporated and unincorporated places.**—In 1950 there were 305 places in California incorporated as cities or towns and 124 unincorporated places of 1,000 inhabitants or more. The 95 incorporated places with fewer than 2,500 inhabitants accounted for 138,895 of the 7,191,394 persons living in incorporated places. Of the 383,281 persons living in unincorporated places, 131,812 were in the 81 places of 1,000 to 2,500 inhabitants. The incorporated places in California ranged in size from Hornitos town with a population of 126 to Los Angeles city with a population of 1,970,358.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages, with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

**Urbanized areas.**—There were eight urbanized areas entirely within California. Of the 7,219,444 persons in the urbanized areas, 3,923,109 were living in the nine central cities, Fresno, Los Angeles, Oakland, Sacramento, San Bernardino, San Diego, San Francisco, San Jose, and Stockton, and 3,296,335 were in the urban-fringe areas. The urban-fringe areas had 2,069,829 persons living in 89 incorporated places and 1,226,506 in the unincorporated parts (tables 2 and 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See urbanized area maps.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

## NUMBER OF INHABITANTS

VII

**Central cities.**—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

**Urban fringe.**—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportational, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within  $1\frac{1}{2}$  miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

Table 6.—POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1930 TO 1950

[“Uninc.” designates an unincorporated place. “Townships” shown here are judicial townships. Figures for 1940 and 1930 not available for unincorporated places or places incorporated since April 1, 1940. Minor civil division figures for 1940 and 1930 do not necessarily add to county totals. Boundary changes between 1940 and 1950 given in footnotes; for changes between 1930 and 1940, see reports of 16th Census (1940), *Population*, Vol. I, pp. 123-126. Total population of a place located in 2 or more minor civil divisions appears in table 7.]

## URBANIZED AREA MAPS

The eight urbanized areas in California, for which statistics are shown in table 9, are depicted in the following maps. The shaded areas, in combination, comprise the urbanized areas. To assist in locating the exact external boundaries of the areas, each bound-

ary feature (street segment, political boundary, or other) has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
